## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 40-42 are rejected under 35 U.S.C. 103(a) as being anticipated by Dreifus (US Patent 5,391,895), newly cited.

Dreifus discloses in figure 5 common gate electrodes 35 and gate pads 41, source pads 44 and drain electrodes 37 (see figure 4).

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 51 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dreifus as applied to claims 40-42 above, and further in view of Takahashi (US Patent 5,751,024), newly cited.

Dreifus discloses the limitations in the claims, as discussed above, but does not expressly disclose an IGBT.

Takahashi discloses in figure 3 an IGBT (note that the device may also be operated as a vertical MOSFET). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to configure the device of Dreifus to operate as an IGBT so the device would be usable as an insulated gate bipolar transistor.

***Allowable Subject Matter***

5. Claims 1-20, 38, and 39 are allowed.

6. The following is an examiner's statement of reasons for allowance:

The reason for indication of allowability of the above claims is the limitation therein of a plurality of gates electrically independent of each other.

7. Claims 43-50 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The reason for indication of allowability of claims 43-50 is the presence of defective cells along with the other limitations in those claims.

***Response to Arguments***

Applicant's arguments with respect to the rejected claims have been considered but are moot in view of the new grounds of rejection.
